For more information on brushes, see "Tutorial: Using brushes in Photoshop," after the list. Brushes are one of the most popular tools in Photoshop. They can be used for various effects, including * painting * erasing * retouching * blending * creating layer masks. There are two types of brushes: The Photoshop brush behaves like a paintbrush or pencil. This is the most familiar brush type and can be used to apply brush textures. For more information, see this tutorial. The Photoshop brush acts like a stamp. You paint or draw in brush strokes, and the Photoshop brush transfers the stroke to any pixels it touches. Fonts and Type The Photoshop font menu lists all fonts that are installed on your computer. When you choose a font, it appears in a drop-down list for easy selection. Photoshop comes with eight different typefaces, and you can add new typefaces to the list from your computer's fonts. For more information, see this article. Effects High-Quality Effects Because Photoshop is the ultimate creation tool, you can choose a large number of effects in the Effects panel. These include standard effects such as the Burn tool and other well-known filters, plus many unusual ones such as Glow and Bevel, as well as interesting features like "Mini Pixels" and the "Vignette" effect. Effects You May Find The Effects panel lists a variety of effects and effects filters. You can use them as one of your basic tools for creative effects or as an additional element to add to your pictures. Effects Filter The Effects Filter option in the Tools panel lets you quickly apply one or more effects filters. The Effects panel shows a preview of the filter before it is applied to your image. Effects Plug-ins The effects that you can use include the following, which are available from the Effects Plug-ins panel in the Image toolbar (such as Adjustment in the screenshot above): * Shadows * Brushes * Deke on Deke * Glowing Edges * Paint.net * Lighten * Lighten and Darken * Multiply * Add * Contrast * Lens Distort * Grain * Spot Heal * Bouncy * Mini Pixels * Vignette * Undo *

A co-preparation method for electrochemical determination of methyl gallate. A convenient co-preparation approach is utilized for the on-line concentration, enrichment and separation of methyl gallate (MG), a phenolic antioxidant used in foods and drink powders. The method is based on the adsorption of MG onto a solidified mixed solution of Fe(2+)/Ce(4+) with an up to 7-fold concentration factor. The spiked samples were detected electrochemically. The potential difference between the working electrode and the reference electrode is measured without liquid transfer, which is fast, easy, sensitive and suitable for industrial application. The precision and reproducibility of MG detection is satisfactory (RSD for peak height In the petroleum industry, a wide variety of fluids are utilized. Sometimes the fluids are injurious to the environment. Such fluids are typically referred to as pollutants. It is usually desirable to remove such pollutants from fluids to reduce the toxic or otherwise harmful effects on people and to protect the environment. Aqueous based fluids are quite common in the industry. Many of these fluids contain undesirable materials. It is often desirable to remove such materials. Such removal is often very beneficial to people and the environment. Another common fluid, or at least one prevalent in the industry, is oil based. Oil based fluids are much more difficult to treat than aqueous based fluids. This is due to the fact that the vast majority of oil based fluids are petroleum based. Furthermore, petroleum based oils are much more difficult to treat in general. A wide variety of contaminants may be found in petroleum based fluids. These include organic compounds. The most common organic compound in a petroleum based fluid is oil. Other organic compounds include gases, waxes, and tar. However, the most common organic contaminants of petroleum based fluids are asphaltenes and resins. Asphaltenes are solids that typically have a boiling point within the range of from about 350.degree. F. to about 450.degree. F. Resins are typically solids that typically have a boiling point of from about 500
